

# Green Infrastructure

## Concerns

- Stormwater runoff
- Potential erosion hazards near Banklick Creek and Licking River
- Minimal tree canopy cover
- Large amount of impervious surfaces
- Combined sewer overflows (CSO)

## Recommendations

- Impervious surface reduction:
  - Rain barrels and cisterns
  - Stormwater planter boxes
  - Curb extensions and green medians
  - Green roofs
  - Rain gardens / Bioretention areas
  - Vegetated swales
  - Pervious pavement
- Tree canopy restoration
  - Street trees and tree lawns
  - Vegetated medians
- Collaboration with local experts
  - Sanitation District No.1
  - City arborist
